

Get a better overview. Trace gas consumption to your production.

© ACCURA is a registered trademark of The Linde Group.

Do you monitor your gas consumption regularly? Are you aware of how changes in your work methods affect the gas consumption? If you answered 'no', the reason might be that the information required has so far been difficult to obtain or in an unusable format. There is a solution to that.

ACCURA® gas management for tanks is one of AGA's Internet services. The service allows you to develop and manage the consumption of liquid gases. It provides up-to-date information on liquid gas deliveries and consumption, regardless of time or place.

Uninterrupted monitoring of gas consumption

For some companies, production may be completely dependent on gas supply. For other companies, running out of gas unexpectedly may cause hazardous situations. Regardless of the importance of liquid gases for your company, the ACCURA® service will always provide you with a quick overview of the development of your gas consumption. You choose the period you wish to review. By comparing any two periods you can see how consumption varies according over time. You can also compare your gas consumption with the consumption of other capital goods to see if gases are being used efficiently.

All information easily available

All the necessary information is available online. The reports included in the ACCURA® service provide details of, for example, gas delivery dates and amounts delivered. The service displays the information for the review period you determine. A summary of how much gas a certain operating unit is consuming is only a few clicks away. This eliminates the need for tedious archiving; you will no longer need separate files for gas purchases, budgeting and accounting. You can only imagine how much time this will save you.

How can ACCURA® gas management help you?

ACCURA® gas management for tanks makes it easy to compile information for official inspection visits and obtain up-to-date status information for persons in charge of environmental and quality issues. Checking the storage capacity of gas stations and finding the persons in charge takes next to no time at all. In hazardous situations you can also quickly inform fire safety authorities of the amount of gas in each tank. ACCURA® gas management for tanks has also successfully been used by some AGA customers to track irregular gas consumption and find leaks. Please contact your local sales representative to find out more about ACCURA® gas management for tanks.
