

## Process audit for cutting, welding and heating. Improved efficiency, quality and lower costs.

© WELDONOVA is a registered trademark of The Linde Group.

Many manufacturing companies work in lean organizations today. This means that small and midsized companies have to keep their focus on producing. They don't have the resources or time to find more efficient ways of working.

That's why the WELDONOVA® process support offers the service process auditing which allows companies to an external assessment of the opportunities that exist to improve their efficiency, quality and cost savings.

A process audit is done in close cooperation with the customer to analyze production processes regarding welding, cutting and heating. The final result is presented in a report with proposals for improvements.

The WELDONOVA® process support has extensive experience in process development and with many different types of customers.

### What is a process audit?

Mapping of the company's welding, cutting and heating processes with a focus on:

#### Optimal process

- Does the staff have the correct instructions and how do they follow these instructions?
- Are there prevention activities to reduce interruptions, repairs, etc?
- How is quality secured?

### Results

The results are presented in a report clarifying deficiencies, opportunities and action proposals.

The WELDONOVA® process support is a division of AGA working with process support, training and technical studies related to various welding and cutting processes. Please contact us to learn more about our services.
